This course explores the role that artists have played in critical thinking and cultural change. Art, like social change itself, has the potential to affect and shape the world in new and unexpected ways. In this course we will look closely at art movements and movements within art, we will investigate how art can help us understand the complex political, economic, and cultural intersections that shape the world today, we will examine artists that have been critical social scientists, activists, and educators, and we will examine how art can contribute to the critical thinking necessary for our present and future society. The studio course takes as its central concern the way in which the built environment compels specific modes of human interaction. These actions, in turn, comprise the nexus of any aesthetics and performative experience. While human beings have always made themselves at home in their terrestrial environment, it is now frequently "naturalized" that exists only as a means to "mastery" which, through building, creates "The Order". Considered to be a means of social control, planning & design increasingly exercise a normative force upon the day-to-day reality of human existence. The relative reversibility of man's relationship with the natural world is a basic postulate to a particular philosophy of planning, and through its methodology: the discourses of "representation" & "automation" these principles have increasingly been fundamental to the process of urbanization of the last century (though they have their antecedents in the nineteenth century). This course will illuminate these principles, and the symbolic and material manifestations of such relationships, with particular emphasis on architecture.

In this seminar we will analyze environmentalism and the historical and cultural contexts that have led to the current crisis of the environment. We will look at the theories of ecology and the models of urban and industrial ecology with special attention to the history of green thinking and its influence on current positions. We will consider why and how ideas about sustainability are contested and analyzed. How have different local and global forces influenced the strategies of redesigning cities toward sustainability? What different forms of environmentalism have emerged? Have they been successful, and what are the reasons for their failure? We will examine how these ideas of sustainable urbanism and the idea of ecologically integrated cities and cities of the future have been conceptualized, and what are the possibilities and limits of their implementation, in the context of today's urban environment. Architecture, at the core of the Global Climate crisis, can play a vital role in preventing it by contributing a more sustainable mode of development for future generations (Plunkett and Mason, 2006). This workshop will focus on two of the most recent contributions in the area of sustainable architecture, which while very different in their approach, both propose strategies for rethinking architectural production and its role in the global climate crisis. In five lectures from the faculty of the Department of Architecture at Columbia University we will focus on the works of Mark Fischer, Canadian architect, and Demolition Master, 2018, Megan Garber, New York based practice. Fischer proposes a cultural re-imagination of architecture that does not require the extraction of materials. Garber hopes to establish a new practice through teaching architecture students in situ. 5ec8ef588b
